

MANUAL BAND SAW

Kalamazoo Machine Tool's model H350M manual band saw is supplied with a 3-HP blade-drive motor, a full coolant system, and full blade guarding. Once material is positioned and locked into place,

the operator pushes a button and the saw frame makes the cut at the preset rate, returning automatically to clear the workpiece.

The saw features an infinitely variable speed control from 60 to 360 FPM with mitering up to 45 degrees to the left and 60 degrees to the right. Cast-iron components are intended to provide vibration-free sawing. Round stock capacity is 12 in. at 90 degrees, 10 in. at 45 degrees, and 6½ in. at 60 degrees.
